Brief note of the project:

Tuiriza cluster is located 5kms from Phullen village, more than 50 farmers have land in this cluster but most of them are very poor and could not developed their land for wet rice cultivation and the main system of farming is shifting cultivation.

During 2012-2013 Land Development work was carried out from RKVY scheme in Tuiriza cluster which covered 30

Ha of land and benefitted by 45 families. With the opportunity of this scheme 35 families of Phullen village started cultivation of rice as permanent farming in this Cluster. The Production of rice has increased three fold comparing to the last five years. Besides, farmers of this cluster can now cultivate vegetables in their WRC areas after harvesting paddy, which gives extra income during rabi season.
