A. BEFORE THE PROJECT :

The farmers in this area uses both human and animal power to plough their rice fields. when undertaking different operations on a farm, a certain amount of work and time is required to complete their task. Less no of labours and animal power and non availability of machines in this area is the main draw back in increasing their rice production.

B. AFTER THE PROJECT:

Knowing the needs of the areas, Custom Hiring Center (Tractor) was established. The income generated through this custom hiring of tractor has reached an amount of Rs. 15,0000.00. Tillage operation could be completed easily in 2-5 days while manual and animal power took almost 2 weeks to complete their task. Rice production in this area are expected to increase to their fields in the future.
