

SUCCESS STORY OF RKVY AT ZAPAMI VILLAGE: As reported by Chairman RKVY project committee Zapami Village.

The RKVY Project was implemented in Zapami Village by the Agriculture department during 2012-13. Under the Scheme, the Department provided Power Tillers to the village community free of cost along with construction of power tiller path from the village to the main TRC paddy cultivation area of about 25 Ha. This greatly helped the farmers to plough the plots during paddy transplanting season. In the past years, the villagers practiced with only manpower with few plough Ox, but this year, more area has been covered with more paddy production as the machine could reach the fields conveniently with the help of power tillers.

Moreover, other benefits from the department against the scheme were on cash crop cultivation and integrated farming which helped many poor farmers raise their economy through taking up different activities along with financial assistance; distribution of tools and implements, sprayers free of cost and also construction of Agriculture Marketing cum resting shed.

We therefore, would like to thank the Agriculture Department, Nagaland for implementing RKVY project in our village with great success and for which this statement is hereby furnished.
