

Geo-tagging is the process of adding geographical information like latitude and longitude to various media such as photo or Video. Geo – Tagging is of paramount importance to states and Government of India to understand flow of funds, inventorying the assets, bringing in transparency, planning of assets for future, and finally informing the farmers about the facilities available. Hon'ble PM the on several occasions emphasised on the use of technology for reporting of assets created through geo-tagging. The assets created under RKVY can be monitored by geo-tagging using BHUVAN, a geo-platform of **National Remote Sensing Centre (NRSC)** of ISRO, Hyderabad.

The assets generated under RKVY program have been grouped into **Movable and Non-movable assets**. The geo-graphic location of non-movable assets like infrastructure should be taken up on priority basis to access information of such assets created during the past several years using funds from RKVY program. Several states have geo-tagged **movable assets also** using funds from the RKVY program and the following pictures depict the tractors, power tillers, generators , implements etc. that have been Geo-Tagged.

**UP Movable Assets**

**J&K\_Movable Assets**
